Table of Contents

1. Introduction

- 1.1. Design goals
- 1.2. Architecture Summary
- 1.3. Protocol Stack

2. Conventions used in this document

3. MobilityFirst Network Protocol (**Kiran**)

- 3.1. Design Principles
- 3.2. Reliable Hop-by-Hop Block Transport
- 3.3. Dynamic Name Resolution
 - 3.3.1. Early Binding
 - 3.3.2. Late Binding
- 3.4. Hybrid Name-Address Routing
 - 3.4.1. Network name: GUID
 - 3.4.2. Network Address: Locator
 - 3.4.3. Multi-Homed Entities and Groups
- 3.5. In-Network Delivery Services
- 3.6. Service-Oriented Routing Header
 - 3.6.1. Service Header Extension

4. Name Certification Services (**Jun, Ray?**)

- 4.1. Service API
- 4.2. Protocol
- 4.3. GUID Generation
 - 4.3.1. Identity-based GUID Generation
 - 4.3.2. User-Generated GUID
- 4.4. Security Considerations (**Wade, Janne?**)

5. Global Name Resolution Service (GNRS) (**Akash, Tam**)

- 5.1. Service Interface
 - 5.1.1. Insert (and Update) GUID-to-Locator Mapping
 - 5.1.2. Query Locator(s) for a GUID
- 5.2. GNRS Protocol
 - 5.2.1. Hierarchical Organization
 - 5.2.2. Security Considerations (**Wade, Janne?**)
- 5.3. Scale and Performance Considerations
- 5.4. Realization 1: Single-Hop In-Network Hashing
- 5.5. Realization 2: Distributed Name Resolution Service – Arun's Scheme (**Arun?**)

6. Generalized Edge-Aware Routing (**Tam, Kiran, Ray**)

- 6.1. Network Organization: Networks, Sub-Networks, and Ad-Hoc Networks
 - 6.1.1. V-Nodes
 - 6.1.2. Limitations of Present Protocols and Goals for Future Internet
- 6.2. Inter-Domain Routing Protocol
 - 6.2.1. Telescoped Dissemination of Path Information
 - 6.2.2. Morley's Scheme (**Morley?**)
- 6.3. Intra-Domain (Edge) Routing: Generalized Storage Aware Routing (GSTAR)

- 6.4. Scalable Multicast Using Heuristic Forwarding
- 6.5. Ad-Hoc Networks
- 6.6. Stability Considerations
- 6.7. Security Considerations **(Wade, Janne?)**
 - 6.7.1. Secure Routing Exchanges

7. Network Management **(Kiran, Suman, Jim?)**

- 7.1. Design Principles
- 7.2. Architecture
- 7.3. Interfaces To Access Network State
- 7.4. Roaming and Host (or Client) Management (AAA)
- 7.5. Fault Tolerance Considerations
- 7.6. Security Considerations **(Wade, Janne?)**

8. Compute Plane and Value Added Services **(Yang, Xiaowei, Kiran)**

- 8.1. Extensible Network Service Architecture
- 8.2. Service API
- 8.3. Security Considerations
- 8.4. Sample Services

9. MF Use Case 1: Content a First Class Network Entity **(Kiran, Feixiong, Yanyong)**

- 9.1. Content Naming, Publishing and Discovery
- 9.2. Content Retrieval Protocol
 - 9.2.1. Security Considerations **(Wade, Janne?)**
- 9.3. In-Network Caching
- 9.4. Scalability and Performance Considerations

10. MF Use Case 2: M2M and Sensor Application Support **(Jun Li)**

- 10.1. Naming Considerations
- 10.2. End-point Resource Considerations and Function Offloading

11. MF Use Case 3: Support for Context Applications **(John, Jun Li, Rich Martin)**

- 11.1. What constitutes a context?
- 11.2. Representing Contexts in MobilityFirst
- 11.3. Component Architecture
- 11.4. End-to-End Protocol

12. Discussion of Open Issues

13. Conclusions

14. References

- 14.1. Normative References
- 14.2. Informative References

15. Acknowledgments Appendix A. MobilityFirst Packet Header Definitions

- A.1. Service Header Extensions for Common Services
- A.2. Hexadecimal SID Values for Proposed Services
